

Expressing Gratitude to Healthcare Professionals

1. Motivation behind Research Paper

The reason I decided to research this topic was because of my experience with the corona disaster. The thing that we can do is prevent infectious disease when coronavirus is prevalent. This will be the best way people can do for society, and I think that this way is very important. Therefore, I wondered what I could do to help the medical workers who have always supported us to live healthy lives, but I thought that we couldn't contribute to the medical and medical workers on a large scale. Based on them, I think that I want to research things that we can do for medical and medical workers that help our health.

2. Introduction

The aim is to find things that students can do to contribute towards medicine and medical workers through their hobbies. The thing is that several students from Osaka City University School of Medicine contributed to medical and medical workers by holding a charity concert. I decided to think about what students can do by connecting music and medicine. I found "Osaka University Medical School City Concert." After preliminary research, I found that it is a concert which is held by a group of eight volunteers from the Osaka City University School of Medicine. They held Corona Charity Concerts. They made revenue by placing donation boxes at

their concerts. In addition, they raised funds by doing crowdfunding. They donated these funds to the Osaka Prefecture Nursing Association. The planner was a violinist. He thought about what he could do now for medicine. As a result, he came up with the idea of a charity concert. He approached seven violinists. They then sent an email and letter of thanks in return for the crowdfunding, and they will later distribute a limited number of concert videos on YouTube. I think there are many kinds of hobbies in the world. For example, playing musical instruments, drawing, reading, photography, sewing, and many others. I thought that each of these hobbies could be connected to contribute towards medicine. For example, there are YouTube and music audio distribution sites for people who enjoy playing musical instruments, there are apps and websites dedicated to selling illustrations and drawings for people who enjoy drawing, and we can also use crowdfunding. We thought that we could contribute to medicine even though it is difficult for us to work part-time by collecting money little by little through these means and then donating or fundraising. We can contribute to medicine by donating money that we collected and I thought that we can get many medical supplies by this way. The advantage of allowing me to enjoy my hobby and contribute to society at the same time. The data collected for this research paper will include online resources, interviews and questionnaires.

3. Results and Analysis

This way is good for students to contribute to medicine. I would practice this way myself to find out how difficult it would be, but I didn't have the time. Therefore, I decided to talk to someone I know who has been selling his drawings on the Internet and SNS for about four years to raise money. He said, "The pictures that were purchased ranged from simple drawings done in about 30 minutes to paintings that

took days to complete. I paint as a hobby, so I'm happy if my paintings are helping someone find healing or something. There is nothing hard about it. It is not a job, so I can take a break at any time and have fun while I can. Sometimes I get requests to paint this picture. He said, "I enjoy painting because it's a hobby. This shows that, as a hobby, he can contribute to society while having fun at the same time. Since they are not pressed for time, they do not feel rushed. He spoke of the slander that often occurs on social networking sites. He said that he sometimes receives slanderous comments, but that he takes steps to counteract such comments by turning off the comment function. He spoke of the slander that often occurs on social networking sites. He said that he sometimes receives slanderous comments, but that he takes steps to counteract such comments by turning off the comment function.

4. Conclusion and Future Problems

It is easy to think that it is difficult for students to contribute to healthcare, but I have found that this is not the case. We can contribute to healthcare by using our hobbies and favourite activities. By doing so, we can contribute to society while doing what we love. There are the risks. Many hobbies are artistic, such as music or painting, and they involve human sensibilities. Therefore, there may be trouble due to differences in values.

5. Reflection

Before we had the coronavirus, I did not take good precautions against colds and other infections. Because of this, there were times when I would pass it on to my

family and others. However, when I was faced with the corona disaster, I realised that I had to protect my life by myself through this exploration. I felt that if I don't protect my life by myself, I will cause trouble to the people around me.
